

WHAT A BIOCHEMISTRY GRADUATE CAN DO...

Graduates with a Bachelor's Degree in Biochemistry are qualified to undertake research and development activities at universities, research centres, companies and in industry. The fields in which they work are:

Research

Biochemists can pursue careers in molecular research in fields such as biochemistry, microbiology, toxicology and pharmacology in both the public and private sectors.

Development

Many research centres, universities and hospitals have departments where biochemists play a key role in I+D+i activities. Research in physiology and molecular pathology, cell therapy and gene therapy are areas with a high demand for these professionals.

Biotechnology

Biotechnological applications of biochemical processes are generating numerous products with an enormous potential for improving the welfare and development of society. Biochemists engage in a wide range of activities in agrifood, chemical and pharmaceutical biotechnology industry including production improvement, food preservation and packaging, genetic improvement of fruit and vegetables, improvements in cereal and fungi cultivation, improvements in grape growing and wine production, biofuels, disease diagnosis, vaccine development, the search for therapeutic targets and new drugs, nanotechnology, and many others.

Teaching

Teaching and health education at universities is another field open to biochemists.

Health

In addition to research and biotechnology in the health care field, biochemists may opt to do advanced training through residencies at hospitals in the specialities of clinical analysis, clinical biochemistry, microbiology, parasitology, radiopharmacy and immunology after taking the BIR or QIR qualifying exams.

WHY STUDY BIOCHEMISTRY?

Because you attain a broad knowledge and understanding of the molecular basis of living organisms that permits you to improve many aspects of our daily lives, from health and nutrition to the environment.

Because you obtain professional training in this experimental science and the skills required to perform specific methods for use in hospitals, clinical laboratories, pharmaceutical and agrifood companies, research centres and the biotechnology industry; sectors which are undergoing enormous expansion worldwide.

UNIVERSIDAD DE CÓRDOBA

UNIVERSITY OF CORDOBA
Faculty of Science

Bachelor's Degree in
BIOCHEMISTRY

LEARNING OUTCOMES

The learning outcomes of our Bachelor's Degree in Biochemistry are set out under the agreement reached by the Andalusian Bachelor's Degree Commission. The Commission, headed by the Universities of Cordoba, Granada and Seville, developed 75% of the curriculum based on the White Paper on the Bachelor's Degree in Biochemistry and Biotechnology as well as external references.

The Bachelor's Degree in Biochemistry aims to ensure that students acquire adequate knowledge of scientific and technological aspects of biochemistry and molecular biology and their role in society and modern life.

The degree also improves upon a set of basic skills necessary for personal and professional development.

GENERAL OBJECTIVES

1. Acquire comprehensive knowledge of the organisation and functioning of biological systems at the cellular and molecular level, and distinguish between the molecular mechanisms and chemical transformations responsible for biological processes.
2. Ability to apply knowledge of biochemistry and molecular biology in the professional setting, particularly in the fields of research and development, including problem solving in the field of molecular biosciences using scientific methods.
3. Exchange information and ideas within the fields of biochemistry and molecular biology. To share the results of professional activity in a way that is accessible to both to other professionals and general audiences.
4. Develop the independent learning skills required for further specialisation including the capacity to assimilate and keep up to date on cutting-edge scientific and technological innovations in the molecular bioscience field.

COURSE STRUCTURE

FIRST YEAR	
Semester 1	Semester 2
<ul style="list-style-type: none"> Chemistry Organic Chemistry General Mathematics Cell Biology Physics 	<ul style="list-style-type: none"> Physical Chemistry Biochemistry Statistics Organography Fundamentals of Genetics Fundamentals of Biochemistry
SECOND YEAR	
Semester 1	Semester 2
<ul style="list-style-type: none"> Fundamentals of Microbiology Macromolecular Structure Enzymology Biochemistry Computing Molecular Physiology of Animals 	<ul style="list-style-type: none"> Biophysics Quantitative Instrumental Methods of Analysis Macromolecular biosynthesis Molecular Physiology of Plants Molecular Genetics and Genetic Engineering
THIRD YEAR	
Semester 1	Semester 2
<ul style="list-style-type: none"> Regulation of Metabolism Experimental Biochemistry I Immunology Food Chemistry and Biotechnology Environmental Biochemistry and Biotechnology 	<ul style="list-style-type: none"> Clinical Biochemistry and Molecular Pathology Experimental Biochemistry II Industrial Biochemistry and Microbiology Cell and Molecular Toxicology Cellular and Molecular Basis of Development
FOURTH YEAR	
Semester 1	Semester 2
<ul style="list-style-type: none"> Molecular Systems Biology Human Genetics Optional course 1 Optional course 2 Optional course 3 	<ul style="list-style-type: none"> Biochemistry and Society Optional course 4 Optional course 5 Final Project
OPTIONAL COURSES	
<ul style="list-style-type: none"> Bioanalytical Chemistry Virology Biochemical Engineering Cell Communication and Integration Bioorganic Chemistry Bioinorganic Chemistry 	<ul style="list-style-type: none"> Molecular and Cell Biology of Plants Photobiochemistry and Photobiology Physicochemical Aspects of Biomolecular Interactions Molecular Basis of Environmental Stress in Plants

INTERNSHIPS

Internship at outside institutions and businesses give students the opportunity to apply the knowledge and skills they have acquired at university, complement formal academic training and provide a highly stimulating experience that is particularly important for those undertaking a scientific or technical degree. The UCO Faculty of Science recognises credits earned through internships. The Faculty of Science currently offers more than 350 internship placements at local, regional and national institutions.

NATIONAL AND INTERNATIONAL MOBILITY PROGRAMMES

Academic mobility is a fundamental element in the personal and academic development of students. Mobility programmes expand job opportunities, while fostering respect for diversity and an understanding of different cultures. The UCO Faculty of Science participates in a wide range of national and international student mobility programmes to aid students in enhancing their academic training. These include the SICUE Programme for mobility between Spanish universities, the ERASMUS and Leonardo da Vinci Programmes in Europe for education and training internships. Other mobility programmes are also available in America and Asia.

MASTER'S AND PhD PROGRAMMES

The Bachelor's Degree in Biochemistry provides students with direct access to the job market as well as the opportunity to further their education through Master's or PhD programmes such as those offered by the University of Cordoba.

RESOURCES AND SERVICES

A large number of facilities are available on the UCO Rabanales Campus :

- Lecture halls, interactive classrooms, computer rooms and laboratories
- Library and study halls
- Cafeterias
- Banks
- Job information office
- Copy service
- Lucano Student Residence Hall
- Mental Health Service
- Health Care Unit
- Sports facilities (UCOdeporte)
- Wifi
